ALGOL N について

(IV) Operations (つづき)

島内剛一*

4.7 Elaboration

E を <expression> としよう。 E の elaboration は $e(E)$ と書かれ、これは、もう1つの operation k といっしょに、 E の構成の段階に沿って、つぎのように回帰的に定義される：

$e(E)$ は

core

if $E \equiv \langle \text{identifier} \rangle$, then $\rightarrow K_{\text{identifier}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{go to statement} \rangle$, then $\rightarrow K_{\text{gotostatement}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{block} \rangle$, then $\rightarrow K_{\text{block}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{closed expression} \rangle$, then $\rightarrow K_{\text{closedexpression}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{code} \rangle$, then $\rightarrow K_{\text{code}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{effect notaion} \rangle$, then $\rightarrow K_{\text{effectnotaion}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{real notation} \rangle$, then $\rightarrow K_{\text{realnotation}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{bits notation} \rangle$, then $\rightarrow K_{\text{bitsnotation}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{string notation} \rangle$, then $\rightarrow K_{\text{stringnotation}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{reference notation} \rangle$, then $\rightarrow K_{\text{referencenotation}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{array notation} \rangle$, then $\rightarrow K_{\text{arraynotation}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{structure notation} \rangle$, then $\rightarrow K_{\text{structurenotation}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{procedure notation} \rangle$, then $\rightarrow K_{\text{procedurenotation}}$, else $\rightarrow \text{next}$;
 if $E \equiv \langle \text{array element} \rangle$, then $\rightarrow K_{\text{arrayelement}}$, else $\rightarrow \text{next}$;

if $E \equiv \langle \text{structure element} \rangle$, then $\rightarrow K_{\text{structureelement}}$, else $\rightarrow \text{next}$;

if $E \equiv \langle \text{procedure call} \rangle$, then $\rightarrow K_{\text{procedurecall}}$, (else $\Rightarrow L_0$) ;

Kidentifier :

let $E \equiv \langle \text{identifier} \rangle V$;

pragmatics $V \in V$. **end of pragmatics**

if $a(V) = \text{on}$ then $\rightarrow \text{next}$, else $\Rightarrow L_0$;

let $Q \leftarrow q(V)$;

$\Rightarrow Q$;

Kgotostatement :

let $E \equiv \langle \text{go to identifier} \rangle L$;

pragmatics $L \in L$. **end of pragmatics**

$\Rightarrow L$;

Kblock :

let $E \equiv \langle \text{begin let identifier } V_1 \text{ be expression } F_1 ;$

let identifier V_2 be expression $F_2 ;$

.....

let identifier V_m be expression $F_m ;$

identifier $L_{i_1}^1 : \dots : \langle \text{identifier} \rangle L_{i_1}^1 :$
 expression $E_1 ;$

identifier $L_{i_2}^2 : \dots : \langle \text{identifier} \rangle L_{i_2}^2 :$
 expression $E_2 ;$

.....

identifier $L_{i_n}^n : \dots : \langle \text{identifier} \rangle L_{i_n}^n :$
 expression E_n

end"

with integers $m(\geq 1)$, $n(\geq 1)$, $i_1(\geq 0)$, $i_2(\geq 0)$, ..., $i_n(\geq 0)$;

pragmatics $V_1, \dots, V_m \in V$;

$L_{i_1}^1, \dots, L_{i_1}^n, \dots, L_{i_n}^n \in L$.
