

# Editor's Message to Special Issue of Embedded Systems Engineering

MASATO EDAHIRO<sup>1,a)</sup>

Embedded systems support our social life and industries as “brains” in a wide variety of electronic products such as automobile vehicles, home appliances, industrial equipment, and telecommunication devices. Research and development for these systems require innovative ideas to integrate overall technologies from hardware to software, from fundamentals to applications since embedded systems have to realize new services and features under severe physical and economic constraints. Establishing and advancing the embedded system engineering are crucial not only to develop better products but to keep competitiveness of industries. Although Japan allegedly has some strength in embedded system industry, overseas research activities for embedded systems, mainly in Europe and the U.S., have rapidly progressed and a large number of outcomes have been published. It is critical to vigorously promote research in universities and research institutions in Japan.

In this special issue, we called for papers from industry and academia on a broad range of areas including hardware and software technologies, project managements, and human resources and educations related to embedded systems. Especially, we encouraged to submit papers presented in “Embedded System Symposium (ESS),” which is sponsored by Special Interesting Group on Embedded System in Information Processing Society of Japan.

The number of submitted paper is 19 and 7 excellent papers have been accepted. 14 reviewers assigned from the editorial committee shown below conducted peer-reviewing.

We should accelerate to establish embedded system technologies through collaboration between industry and educational institutions. Since the special issues activate the collaboration, we plan to continue publishing them twice a year.

We would like to express our sincere appreciation to all the authors for their contribution.

## The Editorial Committee

- **Editor in-Chief:**

Masato Edahiro (Nagoya University)

- **Deputy Chief Editor:**

Hironori Nakajo (Tokyo University of Agriculture and Technology)

- **Editorial Committee:**

Hiroaki Fukuda (Shibaura Institute of Technology)

Katsuhiko Gondow (Tokyo Institute of Technology)

Mikio Hashimoto (Toshiba Corp.)

Eiichi Hayakawa (Takushoku University)

Yasushi Inoguchi (Japan Advanced Institute of Science and Technology)

Keiji Kimura (Waseda University)

Takashi Kitamura (National Institute of Advanced Industrial Science and Technology)

Hiroki Matsutani (Keio University)

Yukikazu Nakamoto (University of Hyogo)

Natsuko Noda (Shibaura Institute of Technology)

Kouichi Ono (IBM Research - Tokyo)

Yoshinori Takeuchi (Osaka University)

Takanori Yokoyama (Tokyo City University)

Hironori Washizaki (Waseda University)

---
