Ubiquitous but separated in local act and tracing fact in the model system

Yukihiro Itoigawa
Wisdom Inc.

町には記憶があり名古屋でみた映画はコンピュータ技術活用の観点で見直すことができ person to person, HTML to HTML の情報処理のコンテンツを生む。知られた人の身近の人からの記憶のノートからのキーワード検索は書籍、TV、HTML の既成のコンテンツをインターネットにより手元に引き寄せることができ自己の制作したものの redesign、情報処理によりシナリオにしていくことなどの新しい情報処理メディアを再考させる。町で見て当時の社会動向も記憶された映画の配役が現実の scenario hunting で新たに生きてくる現実の borderless society における事実把握を名古屋市、中津川市（local act）を軸に論考した。

Ubiquitous but separated in local act and tracing fact in the model system

Yukihiro Itoigawa
Wisdom Inc.

Information processing has power new media contents. As recollection movie and variety recognition we could opportunity to produce short-short story at home applied CG, MR, information visualization technique and slide show. Narrative and HTML to HTML communication has opened new person to person relation on the Internet and model outlook has structure of information feed back to make scenario. Content making for mobile guide and travel guidance is related to Zurich, Leipzig, Tallinn and Helsinki. Historical content is stimulated by Freud museum and house of Mannerheim with pamphlet and CD-ROM content. We recognize such kind of content need in local area, Nakatsugawa-SHI. Movie and new media content are evaluated and Logic by information processing and making scenario is estimated in critical systems thinking.

1. Introduction

Information processing is applied in new media at home and we could take apt content under our hand by searching at key word. Ubiquitous was said and interacting between information processing and psychological research has opportunity to do advanced subject like making new content at pointing out new fact. Selection of model to make scenario is held at narrative in local area and also movie related to narrative in recollection. Information processing on the Internet presents new frontier at home like searching name and place for purpose to know and benefit of link function to skip different area but opportunity to get new information. Self made HTML is made at home and by searching used keyword we could have relation to historical person, for instance Finnish Mannerheim said in Helsinki visited Kobe 1908. If we aim to search in real world to make content, we could construct from narrative with familiar information. Movie has long amusing and human history and one of motivation to go to town to see. At recollection view of movie watched in town we could promote new media short-short story with experienced computer technology like slide show, video on the Internet, MR(Mixed Reality) and CG（Computer Graphics. Considering this process we have opportunity to have scenario in Hollywood. Information processing is future and analysis here in this article. Subjects of information technology for purpose to make new content are recollected and recognized to communicate about information processing area at conferences. Subjects are noted recently as follows. Navigation Systems based on Emergence for Information Retrieval and Remote MR(Mixed Reality) work instruction systems sharing real objects in three coordinate systems at Groupware and Network service Work Shop 2009.

2. Analysis, Town and Movie

2.1 Nagoya

We saw movie sometimes in city like Nagoya and could recollect memory of movie.
Big castle is located in Nagoya and Nagoya is known as rich city from Tokugawa era as first family of three honorable houses of the Tokugawa managed.Sometimes I heard professor in European university (in Norway and Finland) said his daughter or son studied in Nagoya University and Finnish photographer said he did lecture about sauna building in Nagoya. Many universities are located in and around Nagoya and Aichi Institute of Technology has experienced to make movie, Title of movie is “Build new castle” directed by samurai as delayed time slip scenario and students majored in architecture built castle used cardboard collected in town like Seto known as china making

Media and university is known at time recruiting announcer for television but sometimes woman said she was failed to enter broadcasting station. About this life event of recruiting job Japanese psychologists are researching about self efficacy. Which is apt Internet searching to

ⓒ2009 Information Processing Society of Japan

select name or word. Bandura at ICP(International Congress of Psychology) Montreal was impressive for psychologist from Lithuania ICP Stockholm 2000.Chiune Sugihara was Japanese diplomat in Lithuania and he was pupil in elementally school in Nakatsusga-SHI(Gifu prefecture) and Nagoya-Heiwa(Aichi prefecture) transferred. Railway is from Nagoya to Nakatsugawa called Chuo line. At memorial Isewan typhoon 50 years we recognized common experienced disaster as Aichi-Gifu typhoon road and influenced, 5098 died. Also railway line from Nakatsugawa to Matsumoto(Nagano prefecture) is cultural zone and sport amusing place like climbing and skiing. Matsumoto is sending volunteers to help people in The Chernobyl Disaster in Ukraine.

This article has one purpose to make guidebook for traveler from abroad. September 2009 I met six people in Nagano-Zenkoji)from Prague. They said about travel route in Japan as Narita, Hiroshima(Hakata),Kagoshima, and (Nagoya) Nagano by railway and to Tsumago(near Nakatsugawa-SHI). At searching by Isewan, Zenkoji and Tsumago we could find content on the Internet. So we have advanced purpose by analyzing why they decided to visit Zenkoji and Tsumago, also Hiroshima(Czech said the dome was built by Czech). Recollection, trust and reality are considered at tracing fact in the model systems.

2-2 Recollection and information processing about movies in Nagoya

Nagoya has variety amusing places but for me places to go are not many, we need strong drive to go amusing place or cultural zone. Isewan typhoon was memorized strongly common in Tokai area, Aichi, Gifu and Mie and memorial ceremony was held in Nagoya. Actress Ryoko Nakano born in Aichi-Tokoname experienced Isewan typhoon with father said her experienced. She was imagined at acting role in movie scenario written from Novel of Seiichi Morimura to memorize her father's brave.

Table1 may stimulates or understanding of the role of episodic factors in retrieval

(1)Key word searching

We could recognize person related to memory of movie. For making sure our memory we could do searching by title of movie on the Internet. It is another retrieval to understand relation between movie and time or place we saw movie and real memory recollected and as sounded by talking about movie. Information processing is possible to make showed another real scene by searching by putting keyword. For instance if we put in keyword into searching machine like Google as "Egypt, judo", we find video of martial arts playing in Egypt. At real daily awareness about car driving someone could watch judo champion wearing sun glass on the way. So at information technique we could make short-short story as match virtually. For instance if we try to make "remote MR work instruction systems" we have opportunity to do match.

Title director	Time and place	Computer technique	Recollected sounded	Slide to person at borderless mobile
Terminator2 James Cameron	1991 Imaike	morphing	Near Graz "Arnold Schwarzenegger"	Judo champion
Red Cliff 2 John Woo	2009 Mid-land square	computer image processing	"repute" by economist	Shido Nakamura
Manon (Lescaut) Yoichi Higashi	1981 near station	not cognitive	Face of Takizawa like colleague	Brother Kitano
Madadayo Akira Kurosawa	1993 felt near sport club(TV)	not cognitive	Psychologist born in Okayama	Casey Stengel

Table1: Recollection of movie seen in Nagoya

(2) Local act

Computer technique is one of categories and at making Terminator computer technology was applied at frequently and became popular in morphing like Aterui making in Iwate university for Mizusawa-SHI(Appendix). Producer of Aterui said he was introduced his imagination to make image of Aterui by Michael Jackson / Black Or White (Dir. John David Landis). We could see short story about five minutes by video. Aterui was hero in northern part of the mainland of Japan and his heritage is in Japanese shrine. Effect of new computer technology provided recognition of history part with imagination by computerization. Information feed back was made by as movie about Aterui. At estimation of movie main actor brought strong impressive and small talking about actor Arnold Schwarzenegger was recalled in working place and at near his home town in Austria. Technology and movie has relation to appeal in public at Terminator production.

(3) Searching computer technique

Doing searching who was director or what part computer technique use we could understand good act was Japanese actor in Red Cliff2.At Red Cliff2 computer technique was not surprised impression, so searching was held using keyword, red cliff and computer technique.

ⓒ2009 Information Processing Society of Japan

High ranked home page guided Japanese actor directed by Chinese director. Japanese actor, Shido Nakamura said computer image processing was held his triple jumping really he didn't do such jump but wire hung him high and image processing was held at editing. Computer technology is doing new epoch and one of topic about new movie on television is looked to introduce how used computer technique at this new movie making like TAITANIC(1997).Episode at making movie applied computer technique was talked by Japanese specialist in Sinjyuku working in USA including encounter famous director at his favorite restaurant. Movie makes information feed back at new impressive making method and talking at economic trend related to social change. For instance "repute" was said by Japanese economist Kiyoshi Imai .under situation continuous economic crisis 2009.Arousing memory about Nagoya post second war Kiyoshi Imai(born in Tokyo-Kiyosumi) talked no construction only destructed by bombing in his lecture compared the two situations of economic situation and investment to stock market. We sometimes have opportunity to hear direct lecture but almost information comes from newspaper, television and radio. Imai said problem at capturing news sources like reporter group unit around politics and economic matter. Television and newspaper has delayed information feed back and showed different estimation about news value. Interacting existed at emotional level and recalling about experienced in Nagoya stimulated by news or movie watching. If we aim to make digital content we never ignore this psychological factor.

2-3 Sounded and Associated

Computer technique is hindered at movie making in Red Cliff2. During searching we could understand Japanese actor Shido Nakamura selected in Chinese movie and his grand father had favorite Haiku and Shido was name of Haiku pen name of grand father. Searching well on the Internet we understand real human relation to family or episode. "Madadayo" is accepted how live in aging society as active senior. Time when to see aging matter some had imagination by the movie to be active like baseball director Stengel and today we could make confirmation about Stengel at name searching content. Movie is considered as recollection by view information processing, virtual reality short-short story, in real world talking associated to situation like world economic crisis. And famous man and woman are easily searched by searching engine on the Internet. Associated memory is also working on the Internet. As information source personal computer could provide high efficiency media circumstance and we could watch small video on our personal computer at home. Sometimes we could see our prime minister's speech in USA provided by The Wall Street Journal/personal finance video and also news in foreign country like Beijing explosion.

(1) Role of solution

About economic trend broadcasted by Internet will advance more at technical item, but we may hope to communicate at individual view and consult or help each other. For such new coming situation we should make scenario referred to rich database. Recent financial panic is analyzed as "Critical path at interface from systems black box not recognized as heuristic but ubiquitous model" aimed to be solved problem of damage at computer moving to make victim. But satisfied solution is seemed difficult because of shutting out communication between customer of securities-company and criminal as peripheral of executed organization. Table1 shows rather old movies not heard as digital making image in movie. "Manon" was memorized by face of Takizawa (Masahiko Tugawa acted) as similar face of my colleague, labor at computer facility management. The time was 1977-1987. News from Europe was impressive. We could imagine to make short-short story in present working place securities company is located and put in one scene associated with different scene from samurai movie, but synchronized present as strong appeal of charge.

(2) HTML content replaced to scenario for real working place

Several computer companies were located in Minato-KU in Tokyo as Oki Electric Industry Co., Ltd, NCR Japan Ltd. and IBM Japan, Ltd. in 1970 – 2000. And we could notice two moving to Chuo-KU in Tokyo. The other side venture capitals have office in new high building at Roppongi in Minato-KU and securities scandal had occurred. Information technology has transferred from big computer facility management with software management and technical service to mini size and highly efficiency software to promote man-man communication network systems in office. But nature of Internet had brought borderless society to make top manager in uncertain world. Collaboration is said in community and decision making is met at real time assessment to make clear which decision is right or wrong. People have opportunity to send message toward borderless society. Swedish Johan Fornas wrote "Borders and transgressions are mutually dependent on each other" in "digital borderlands"(2002 Peter Lang Publishing, Inc.,). I'm making episode and scene in computer-company April 1969-March 2002 as HTML, so called Kandabridge.html (Appendix) our old working place was located and it was recognized well searching in France 2005 summer in Lyon. If we imagine actor or actress scenario based Kandabridge.html we could find apt role from movie seen already, for instance virtually actor Masahiko Tsugawa gave imagination of working style at computer facility in Chuoku-Shinkawa, so we could have recognition about "Takizawa" in movie "Manon". About scene of working in Kanda, Minatoku-Akasaka and Roppongi there are many eating places. It is problem and securities crisis in 2007-2009 by securities-company operation should be considered by view of labor circumstance like Shinkawa closed to Nihonbashi and-Kabuto-CHO classic securities trade place and movie culture was in around Nihonbashi like frequent visiting restaurant Kajiro

ⓒ2009 Information Processing Society of Japan

Yamamoto(film director,1902-1974) came in comparison to American first food shop imagined in Chuoku-Shinkawa.(like Pulp Fiction played 1994).Some death narrative is happened about “Takizawa” died in movie but he is alive in real world acting in working place as vital guy without compromise and cheerful middle age. Feed back loop is prepared for people in borderless society at recognition about business town Otemachi to Shinkawa information technology company removed or remained from 1960’.

Nippon Steel Corporation built new building for its systems and software business in Chuoku-Shinkawa. We could understand its location and circumstance on the Internet. Present on the Internet scenario searching is rather feeling of espionage. To know working situation like e-mail and telephone only communication, so we couldn’t see face of employee at serious crisis happened in securities company operation. Information technology matter has crisis if nobody said claim about wrong result in systems, nobody know systems becoming worse. So case of memory recollection brings link fact and there is probability as synchronized to someone and some part as do redesign at HTML about record of computer-company Adding HTML content we recognize computer technology from information visualization. “Mapping Information onto 3D Virtual Worlds” research in Sophia Antipolis, France was held to focus on the process of automatically mapping data values onto graphical parameters, in order to construct 3D virtual worlds that convey network data for network monitoring and management. Also we need urban informatics at helpful information route providing.

(3) Slideshow

Another recollect memory is caused by movie at talking about city someone born or educated. “Madadayo” was talked with psychologist born in Okayama where novelist was born acted mainly in movie and brought renewal thought about Okayama and the novelist. So place like city and town is important factor related to movie. I thought this pointing is important factor to write scenario as Kim Novak said “Kansas City” in Alfred Hitchcock movie, “Vertigo”.. Here is new technique not video but enjoy movie star at slide show of many stars on the Internet Movie watching is movie to one audience communication in theater. Today we could recognize at benefit of information processing, already said searching machine favorite.First computer technique is here as photos presentation called slide show. It is enough amusing, for instance Kim Novak slide show (Appendix). At psychological view in contrast, recollection is assumed to reflect a search process that supports both recognition and recall performance, whereby elaborative information or inter item information (i.e., information relating the event to its context or to other events) is retrieved.

(4) Language zone and running commentary

We could find English content from Spanish language zone like Mexico but there is obstacle to communicate as discovering bad Kanji inserted to professor article. So we should promote good content making to open communication for trust each other. Internet is occupied by English content but there are Spanish, Russian, Chinese and other language contents.

Radio had power of new media, especially at sport area and we notice case of running commentary as Kohei Murakoso jagging about his running in Berlin Olympic Games 1936 noticed at memorial of Olympic in Helsinki. We could have common memory about Kohei Murakoso by his all running photos in the memorial. As rare communication .case we should know communication between Argentina and Japan. Sometimes newspaper reports about soccer in Argentina with photo of Diego Armando Maradona. But via who’s who information on the Internet I sent e-mail to Argentina, almost e-mail was returned. I remember boxing fighting of Yoshio Shirai against Pascual Nicolás Pérez (March 4, 1926 – January 22, 1977). Pérez was an Argentine flyweight boxer. I thought making content about boxing fighting to make Argentina have interesting about Japan. Content at boxing from Nagoya, are released from boxier like Satoshi Iida(Official site) and Yasuei Yakushiji. As stimulation to communicate and make awareness sport content like boxing is thought would be miracle tool to open new communication route between different language zones like Argentina. Boxier Satoshi Iida has foreign language homepage at his official content. In spite of Spanish we could notice searching name and real person as video sending on the Internet. Such kind of Internet media has power to send rather emergency message globally. I found message from India psychologist (woman) in English and have opportunity to communicate again.

2-4 person to person relation by natural arousing memory

In Japan, local act and historical or professional contribution

Model of movie was Hyakken Uchida (1889–1971).born in Okayama and in Okayama memorial of Tuyoshi Inukai (1855-1932, prime minister, died in terrorism) was located. The guide in his memorial said playing his speech in content of cassette, “This voice showed clearly the reason of his assassination”. The movie “Madadayo” had meaning of senior problem and vivid baseball director was in USA recollected. Searching is possible about Stengel and we could understand human activity at aging but real active person, imagined Casey Stengel at seeing television broadcasted baseball game directed Shigeo Nagashima and recently September 2009 prelease of special program on television reality about baseball players Sadaharu Oho and Shigeo Nagashima at ON 50 years memorial was cognitive. Formerly Akira Kurosawa(1910-1998) produced movies at scenario of novels written by Shugoro Yamamoto（1903-1967）.Shugoro Yamamoto was said by his follower Mitsugu Saotome(1926-2008) "Yamamoto watched in theater movie showing his novel as script about responses from audience”. His one of drama on TV was “The Fir

ⓒ2009 Information Processing Society of Japan

Trees Remain" was impressive at introduction image and narration. Reviewing my memory I thought the place I saw the beginning of drama on television was Nakano-Tokyo.

3. Content searched for mobile and need to make guide

3-1 Impressive estimation about personal making content

When we plan to travel abroad we search traveling guide at bookstore and library. Internet also provides travel information by personal content. For instance.2000 woman prepared traveling guide for world around. It was useful to know place, for instance traveling to Luxemburg and the homepage was presented as yet. So it was good guidance for me. And another Japanese woman living in Sweden as researcher was announcing from clean homepage about Sweden with life wisdom. 2001 about New York Japanese woman in New York was sending message from her home page and it was said by new paper as high clicking home page about information and trend of New York at that time after 11 September.In considering in literature we may check about place information before travel and in public there is library stocked book written by Goethe about Italy traveling and Andersen about Granada and other place in Europe. We could enjoy same emotion compared with Goethe as drinking water description and walking in Granada as Andersen. There is no information directly but in conference abroad we could have friend and friend sent information about Prague as red, yellow and blue subway line. Tourist has very rich information in Helsinki and kind guidance by personnel in information center. But personal information will introduce impressive house like president experienced Mannerheim and Finnish architect lived in America. Also we could read about “Alvar Aalto-Ex Intimo Alvar Aalto through the Eyes of Family, Friends & Colleagues” by Louna Lahti in book.

We could estimate personal home page has attractive quotation and effectiveness strongly. For making digital content we could select pamphlet and digital content given from abroad. For instance I received 2002 calendar from Barcelona, 2003 pamphlet of Freud museum in Wien and 2006 CD-ROM of Mannerheim at his house.At this production for interacting between two countries we encounter difficulty at searching detail fact and we should survey and call help information in real society. Mannerheim was said visited Kobe 1908 but today no narrative is in Kobe to search about Mannerheim visiting. He was said he used Finnish passport but Finland belonged to Russia. There was Japan-Russia War 1904-1905. I made homepage but perfect content has not performed as yet.
http://homepage3.nifty.com/VAN1GURD/trace.html

To receive information about Mannerheim or Barcelona and attitude to Japanese from Finnish or Spanish we should make new content about Japan and home town, Nakatsugawa-SHI, also near around big city like Nagoya related to something as new..

3-2 Need to make content at felt emotion in town

Foreign city gave apt pamphlet to make new in Nakatsugawa-Gifu. I thought Nakatsugawa-SHI should be guided in English pamphlet at attractive common based with foreign city. Considering location of Nakatsugawa-SHI lined Chuo line to Nagoya(up) and Matsumoto(down). Nagoya has old castle and Matsumoto has castle too. I thought what is impressive in Nakatsugawa-SHI, viewing pamphlets collected abroad 2000-2007 traveling Town showed its changeable situation at my traveling time, for instance 2003 and 2006 in Zurich I felt serious promotion to invite traveler, watching at station square, sawdust as soft ground was prepared for soccer games. It was hint to promote new sightseeing attraction in Japanese local area. This type of game was seen in Salzburg like beach volley ball on ground at hot day, on out season of music festival. In Gifu, village and town was said in rising new activity by information technology and music concert was held along Nagara river. I felt good content and music sound in Leipzig 2000 and saw house of Bach. Also in Halle there is house of Georg Friedrich Händel. House is important to invite tourist. We have opportunity to catch information about making content of foreign countries. In Nagoya we could select at free time to study about foreign country like Brazil some percent of Brazilian living in Nagoya and around city. Also we could learn about Germany and Russia by professor majored in German and Russian culture and historical matter between two countries in university opened to public. But in e-mail communication we couldn’t communicate people in South America like Argentina. I’m trying to communicate professional on the university Internet, but e-mail sent by me were returned to me not once and twice. So called on borderland we need apt content as help function.

4. Person related to Nakatsugawa and content trust

4.1 Possibility to collect new information

(1)Kinmasa Katsuno

We could discover person living or working as cultural activity in Nakatsugawa-SHI and near place. A little information from narrative, record and cultural product could produce new content about them and human relation each other. Sometimes I made HTML content and read books. On the way of Kiso-JI to search road of Mito samurai, direct encounter was possible to talk with Kinmasa Katsuno and after his death his daughter said again his word “Social systems like Soviet Union was injuring human living should be destructed future". Kinmasa Katsuno was international communist in Paris and went to Soviet Union.

His life was traced and memory index of communist constitution as injured humanity. Searching is easy about him present and HTML shows he was eminent. Family of Kinmasa Katsuno prepares his history and their photos (Appendix). Also Kinmasa Katsuno HTML His

ⓒ2009 Information Processing Society of Japan

100 years old birthday in Waseda University is presented in Japanese.

name	Memorial	Content	Media	Narrative
Kinmasa Katsuno 1901-1984	Symposium 2001 in Waseda University	Book written by himself from 1934	Newspaper article at honor redemption	New information about Sorge
Chiune Sugihara 1900-1986	At town of Yaotsu	Book by Hillet Levine 1998	HTML	Pupil studied in Nakatsugawa
Sadayatsuko 1871-1946	House in Nagoya	Tanka poetry	TV1985, HTML	Temple built in Gifu-Unuma
Gengi Kadokawa 1917-1975	Haiku	Book selected haiku,	HTML	Haiku in local area Kiso

Table2: Person and narrative with HTML

About Kinmasa Katsuno I could select in my HTML contents by keyword like his name and my name. Internet information feed back brings network relation via HTML at least four.(Appendix). Four HTML are not concentrated to only Kinmasa Katsuno, but it was difficult problem to write about his honor redemption delayed, if we thought about complicated political and business human relation. In my personal homepage we could understand human relation with Katsuno family and president in Nihon Univac 1979 (former name of company closed relation already 2006 as capital investment from US Unisys) Kinmasa Katsuno was person in left wing and after second war he was living in home town along old road Kiso-JI, Nakasendo in Nagano prefecture. On the Internet to guide Kinmasa Katsuno to Foreign countries like Finland, Estonia, Latvia, Poland and France, we should make English HTML at least and selecting what type of content media is apt for information sending is important. At ceremony of his 100 years birth in Waseda University Kinmasa Katsuno was introduced as person claimed or charged no humanity in constitution in Soviet Union and had ability to work alive with superior labor skill..Also in description by Gordon William Prange that Sorge was written and person(Seirin Ishido 2001 died) related to Katsuno and wrote history of Japanese politics was referred to “Target Tokyo, The Story of the Sorge Spy Ring” by Gordon William Prange. There is movie about Sorge, so Kinmasa Katsuno has related to movie world as main or sub person in another movie considering real fact at that historical phase future. There was no information excluding his books when he was living but today we find HTML by searching name in English. When I wrote article “Critical path at interface from systems black box not recognized as heuristic but ubiquitous model" I read book of Gordon William Prange and understood his human relation heard at second time meeting at Katsuno’s home. He studied French language and went to France, so researching his activity should be focused about time in Paris future.

(2)Chiune Sugihara

We could see Schindler's List(director Steven Allan Spielberg ,in Japan 1994) and Chiune Sugihara was recalled. At reading and bumped fact old but as new discovering, Chiune Sugihara was recognized he was pupil in elementally school in Nakatsugawa-SHI 1907 when he was 7 years old and he was transferred to Heiwa elementally school in Nagoya. We could know this fact from book written by American Hillel Levine(Appendix). By searching Chiune Sugihara we could know many HTML content in English. In Japanese content I discovered record about his elementally school when he was pupil in Nakatsugawa 1907, description was written by young teacher in the elementally school and he wrote surprising indication by Emperor about policy in education toward new direction, So guessing is happed Chiune Sugihara never forgot education in Nakatsugawa-SHI, may. As my view from living emotion in same Gifu prefecture or near place to Katsuno’s house(in Nagano closed to Gifu) I aim to make content by insight why they wanted to study foreign language in Tokyo, Sugihara studied Russian and Katsuno studied French before 1920. As developmental analysis I could remember man from Lithuania to Chiba-Kisarazu in Japan for conference on computer and education, and woman in Stockholm ICP2000 said about American psychologist, ”Bandura! in Montreal 1996”. Researching should be begun about new viewing on development and education in Nagano, Gifu and Aichi prefecture in Japan. This analysis development and language learning brings us to psychological view in comparison in conference.

(3)Cultural estimation at Gengi and Sadayatsuko

I could hear about episode about Sadayatsuko and knew her tanka poetry at her house in Nagoya. Also I read book of selection of Gengi’s haiku. We need polite understanding ability about tanka poetry and haiku. And also we have international view about meaning of cultural content like proverb. In Poland proverb is analyzed as key stone of society trend analysis. Cultural viewing and appeal to international content how can we analyze tanka poetry of Sadaytsuko and Haiku of Gengi Kadokawa. It is first research item to make new content on the Internet. Episodic retrieval and associative memory is stimulated by word in haiku or waka as Japanese traditional culture. At this stance we use searching name and key word like haiku and could find foreigner favorite in haiku on the Internet. Time lag and duration exists

ⓒ2009 Information Processing Society of Japan

to recognize the time passed from I met Kinmasa Katsuno, hearing about Sadayatsuko, reading about Chiune Sugihara and recognition of Gengi's haiku and new content making about them is seemed important in local area Nakatsugawa-SHI.

Sadayatsuko's history today mainly focuses on dam constriction related to environment problem, because her has human relation o Momosuke Fukuzawa built first dam at The Kiso River streaming from Nagano, Gifu, Aichi and Mie prefecture, total 227 km long..Sadayatsuko had built memorial architecture in Gifu and Aichi. Sadayatsuko's information and content is stocked as Internet and media content, but this article aim to make content and scenario at local act. At narrative human relation has recognized at Kinmasa Katsuno and Sadayatsuko. Considering Gengi Kadokawa, we should evaluate his haiku read in Kiso(old naming about local area) .So many information is there as Internet content too. First working for me is redesign about my HTML content searched by name of Kinmasa Katsuno, Chiune Sugihara, Sadayatsuko and Gengi Kadokawa. Fresh and impressive content should be redesigned as apt content in view of development psychology like why two men (Kinmasa Katsuno and Chiune Sugihara) did international activity.

4-2 Gender and psychological factor in social development

researcher	Key word	Information source	Digital content	Media Person related
Kazuyo Suzuki in Indonesia	Identification	R.E.Rubin wrote Uncertain2002 APCHI2000	Univ. HTML	TV Newspaper Suharuto
Danguolė Beresnevičienė Lithuania	Self efficacy (Bandura1996) 2000	USA-Japan Interact2006 (Hideko Itoh)	Book, article in Hiroshima	Movie Chiune Sugihara
Kati Heinonen Finland	Self esteem Prediction(systems thinking 1971)	publishing at education area	Mannerheim CD-ROM	Radio Epoch photo of Kohei Murakoso
Elfriede Ederer Austria	Younger child	Roswith Roth, to Hiroshima Univ.	Doc. File (drawing in)	Yukio Mishima psychological gender studies

Table3: Psychological factor and woman research

Content reviewed at new media age

We could understand present psychological term in table3. At interacting we could find psychological term in movie and other media, for instance I noticed term of trauma at guide about Danish movie in Yokohama-Aoba 2000 and recognize by Danish book 2009..

We could receive content as PDF file from Argentina researcher(man) in Stockholm on education and computer 1999, at word doc. File about childhood and development from Graz 2000 and Power point file about social emotion program from Jyvaskyla 2003,After searching from Who's Who on the Internet of ICP Berlin, Power point file of cultural content like proverb and social trend is on the Internet from Poland We, Japanese, could search and receive content from Europe in English.

Japanese woman psychologists are researching about identification in foreign countries and studied about Albert Bandura working in media center in Japan. Two researchers said name of American psychologist Albert Bandura, and in Japanese university self efficacy is researching at recruiting. European research is related to Japanese trend. Self-Esteem (Kati Heinonen, Helsinki) and Childhood and Learning (Elfriede Ederer, Graz) were herd in Europe early. I make table 3 at viewing of ubiquitous borderland. They are selected at contents like article, digital content for conference presentation. Key word stimulus my memory and I recollect several things as follow. **Indonesia:** Old articles as printed researched about Indonesia and guidance in Amsterdam by presenter in Netherlands to national museum in Leiden. At the museum I saw exhibition of Indonesia.

Finland: Japanese sometimes publishes about education problem and report about education in Finland. We could find book of education in Finland in bookstore. Also Finnish movie is possible to see but we should understand Finnish evaluation about real commentary on radio of Kouhei Murakoso running in Berlin Olympic Game 1936. Exhibition in Helsinki sport museum presents its event as media epoch. In researching sport as view from memory and emotion Japanese wrote about Kohei Murakoso. This matter is presented in Helsinki will have meaning of Japanese self esteem. In Japanese town we recognize memory of running style. In Helsinki house of Mannerheim is located and guide game CD-ROM of Mannerheim. Mannerheim was said 1908 he was traveling in Asia and visited Kobe ten days. Here is need to search his staying in Kobe 1908 for content. I went to Kobe and found old photos of Kobe harbor in library. New discovering would be talked about Mannerheim as route to Kobe and staying hotel, also whom he met.

Greece-Graz, Austria: As recollection and recognition Greece is important role to understand real world and Japanese education. Greece is memorized country in Japan and important philosophy and history were studied in Japanese university. 26th International

ⓒ2009 Information Processing Society of Japan

Congress of Applied Psychology was held in Athens 2006 and I met three elder students in university majored in psychology and are working as professor in university present. I could review about Japanese education taught in university. One of old students in psychology class visited Albert Bandura and was researching media like time measure to camera catch announcer or player for comparing skill of experimented professional camera working. In Athens conference I presented poster considered memory of amusing factor in Japanese town. I was learning German in Graz. Austria 2003 summer and went to Greece restraint. Greece is also important as geographic position near to Turkey, Iran, Iraq and Egypt. Language problem exists Internet is mainly provides English content and I and many Japanese couldn't read other language. But including Spanish, Chinese, French, and German language in world is important to understand without translation. Viewing gender we could find women researcher from German about environment related to river environment and water from Germany. As considering.table3 I thought about Sadayatsuko how woman thought about her life recollecting at places she was.

5. Conclusion

1. We could promote new short-short story on the Internet like action match. Scenario is prepared at recollected real commentary like Yosho Shirai vs. Peres 1957
2. For presentation about social trend like analysis of economic crisis 2007-2009 and throw ball to borderless society to be understand we could make content of power point slide show to document record as exciting document daily working on the Internet.
3. Information feed back about movie like Akira Kurosawa(1910-1998) brings new psychological knowledge for promotion movie, such as local culture and senior problem
4. Narrative construction is important to make new Internet content like html and scenario for TV drama and movie
5. As local area this article selects Nakatsugawa-SHI related strongly to Nagaya-SHI and lined by railway to Matsumoto-SHI. Urban informatics is considered to make new relation at three city interacting.
6. We should have opportunity to communicate other country not written in this article and for good communication we should make content to estimate and understand problem existed in real society.

Acknowledgement

Thanks for people as e-mail sending and writing article and book, also directed or played in movie and television, also announce and narrative on radio in recollection.. I hope researcher in information processing area will have opportunity to provide new technology for future scenario and content making.
